Art is...Video series

In this set of two videos, the fourteen elements and principles of design are explored and explained. In Elements of Design, the seven elements of design - value, color, form, shape, line, space, and texture are each explored and clearly explained with diagrams and hands - on demonstrations, including paintings, collages, and sculpture. Examples of elements seen in nature, architecture, and art reinforce the concepts. Gerald Brommer shows in the Principles of Design how the elements of design are used and combined in developing the seven principles of design: contrast, rhythm, unity, emphasis, pattern, movement, and balance. A series of demonstrations are combined with diagrams, artwork, and scenes from nature.
